

Globecomm Connect

Monitor Status and Performance of Remote Assets

Connect and Monitor. By Land or By Sea.

Globecomm Connect is your web-based access to live tracking, data, and performance to your remote assets using Globecomm VSAT and Inmarsat FX or GX service. Customers who manage maritime as well as terrestrial sites can view all of their assets in a single dashboard using the Connect Customer Portal. Remote users with Globecomm-designed and certified shipboard networks will receive access to the Connect Ship Portal.

Globecomm Connect includes a Shoreside Portal and a Shippide Portal to view and monitor network status.

CONNECT CUSTOMER PORTAL

This shoreside portal is accessible to customers who wish to monitor location and network performance of their remote VSAT and FX/GX sites. Data usage statistics for the last day, week, and month can easily be viewed (FIGURE 1A) along with a map showing the current location of the vessel or terrestrial site (FIGURE 1B). It is also possible to see whether a maritime site is experiencing blockage, and if the ship is currently within service coverage.

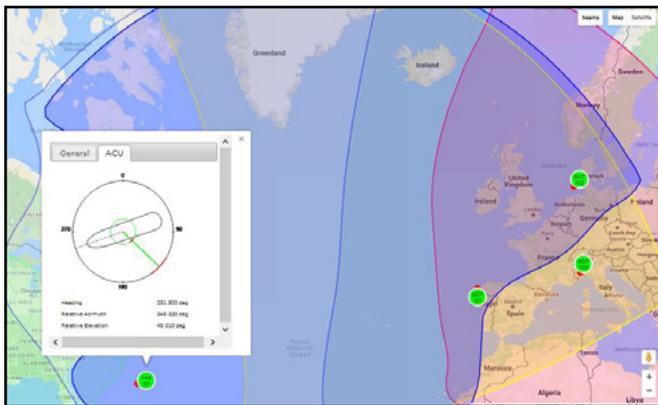

FIGURE 1B

CONNECT SHIP PORTAL

This shippide portal provides visibility to captain of network status, current beam, ship's heading, speed, and diagrams of beam direction, elevation, and whether beam is in a blocking zone. This tool can provide captain with awareness of when the VSAT network is not available, and when local blockage could be causing an outage for the VSAT network (FIGURE 2).

FIGURE 2

Globecomm Connect Ship Portal gives the captain better visibility and therefore better control of his network.

Please ask your Globecomm Account Manager about our certified Platinum Installations. Connect Ship Portal is free to all Globecomm VSAT vessels with certified Platinum Installations.
